

PRODUCT DETAILS – HERA

Expandable kiosk system with A4 printer

175 cm

THE PHEX STAND MODEL

The HERA model is a function-oriented kiosk system designed for interior areas (indoor use). It offers sufficient space for additional components such as A4 printer (thermal or laser), card reader, RFID reader and guarantees reliable and simple operation at POI / POS.

The devices can be individually customised according to design requirements through stickers, prints and powder coating even for just a single unit.

Features of the standard version

Features HERA

- indoor model
- aluminium & steel plate housing
- vandal-proof (security lock, protective glass)
- colour: black with aluminium profiles
- good fire safety characteristics
- multi touch

Optional Components

- mount: free-standing or bolted into the ground
- screen diagonal: 19" or 22"

Technical data for the standard version

Screen

- LCD display with LED backlight
- 16:9 format with 1920 x 1080 pixels | 19" 5:4 - 1280 x 1024 pixel
- brightness 250 cd/m²

PC system

- integrated, fully fledged Windows PC
- standard version with i3 or i5 (optional Android digital signage player)
- design can be customised for your requirements

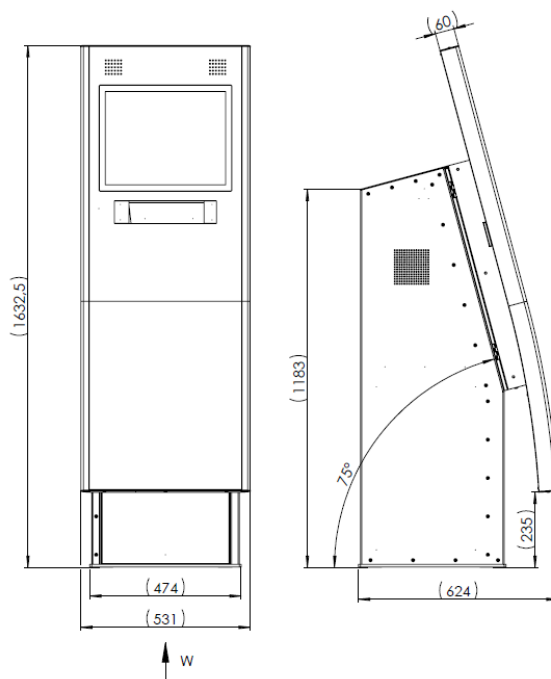

Touch

- 10 point multi touch
- capacitive technology

Connectivity

- LAN

Dimensions of the standard version

HERA 19"

RFID

- NFC / RFID reader

Colour / Labelling

- customise colour of housing (corporate design)
- add stickers to customise the housing (temporary or permanent)

Multimedia

- WiFi
- USB port (external)
- Barcode reader
- card reader
- cashless payment option (EC, credit card)
- loudspeaker
- headphones
- keyboard
- mobile data network (3G / 4G)
- A4 printer
- coupon printer
- telephone receiver

POSSIBLE APPLICATIONS

The HERA model has a diverse range of applications. Its traditional function is as a self service terminal. In this context its tilted screen makes it particularly suitable for individual use.

For most applications, the device is protected by digital signage software such as SiteKiosk. This prevents other applications or websites from being accessed when the browser is used. In addition the software enables the central control of several devices.

In the retail sector the HERA terminal can be deployed as a product configuration system. For this purpose, the model is often fitted with an additional barcode scanner and payment options.

The HERA terminal can also serve as a staff information system. RFID technology allows staff to be identified and gives them access to personal information. They also can print the documents directly on the device.

Depending on each use case there is a wide range of suitable software for the following applications:

Presentations

images, videos, PDF files, web pages, PowerPoint presentations (PPT viewer)

Employee information system

menus, safety at work instructions, product training, digital displays etc.

Product configurator

select features and display suitable products
